Fiscal Year:	FY 2006	Task Last Updat	ed: FY 10/11/2007
PI Name:	Cucinotta, Francis A Ph.D.		
Project Title:	Space Radiation Risk Assessment		
Division Name:	Human Research		
Program/Discipline:	HUMAN RESEARCH		
Program/Discipline Element/Subdiscipline:	HUMAN RESEARCHRadiation health	1	
Joint Agency Name:	Т	echPort:	Yes
Human Research Program Elements:	(1) SR:Space Radiation		
Human Research Program Risks:	 (1) ARS:Risk of Acute Radiation Syndromes Due to Solar Particle Events (SPEs) (2) BMed:Risk of Adverse Cognitive or Behavioral Conditions and Psychiatric Disorders (3) Cancer:Risk of Radiation Carcinogenesis (4) Cardiovascular:Risk of Cardiovascular Adaptations Contributing to Adverse Mission Performance and Health Outcomes (5) CNS:Risk of Acute (In-flight) and Late Central Nervous System Effects from Radiation Exposure (6) Degen:Risk of Cardiovascular Disease and Other Degenerative Tissue Effects From Radiation Exposure and Secondary Spaceflight Stressors 		
Space Biology Element:	None		
Space Biology Cross-Element Discipline:	None		
Space Biology Special Category:	None		
PI Email:	not available	F	ix: FY
PI Organization Type:	NASA CENTER	Pho	ne: (702) 895-4320
Organization Name:	University of Nevada, Las Vegas		
PI Address 1:	Health Physics & Diagnostic Sciences / BHS-345		
PI Address 2:	4505 Maryland Parkway		
PI Web Page:			
City:	Las Vegas	Sta	te: NV
Zip Code:	89154-3037	Congressional Distri	et: 1
Comments:	Formerly at NASA Johnson Space Center	er, until summer 2013 (Ed., Oct 2013)	
Project Type:	Ground	Solicitation / Funding Sour	ce: Directed Research
Start Date:	06/01/2006	End Da	te: 05/31/2011

Performance Goal No.:	
Performance Goal Text:	
Task Description:	The Risk Assessment Project at Johnson Space Center is responsible for the integration of results from NASA space radiobiology research into computational models used for astronaut radiation risk assessments. The purpose of the Project is fourfold: (1) evaluate the extent to which ongoing research leads to reduction in the uncertainty of risk assessments and provide, as a metric of program progress, the number of days in space during which the radiation exposure of astronauts remains below NASA limits within a 95% confidence interval ("safe days in space"); (2) perform mission planning studies to predict the number of safe days for any mission; (3) assess the radiation risk to astronauts for ongoing missions in real time; and, (4) provide recommendations for research directions most likely to reduce risk or improve the accuracy of risk predictions. The four categories of risks from radiation in space are defined by the NASA Bioastronautics Roadmap (BR). They are: 1) Carcinogenesis, 2) Acute and late effects to the Central Nervous System (CNS), 3) Degenerative Tissue Effects such as heart disease and cataracts, and 4) Acute Radiation risks. The number of safe days currently predicted for an astronaut's career is less than required by mission planning, due to the large uncertainties in risk prediction. In particular, a projection uncertainty below + or - 50% is the goal for the 1000-day Mars mission because the high level of risk will require high precision risk evaluations. The current approach used to project risk is based on epidemiology data and on phenomenological models used to derive risk prediction from them. This approach cannot lead to improvements in the accuracy of risk prediction a factor of approximately 2. New approaches using molecular biology and genetics are the only viable ones for achieving the level of accuracy required by space exploration and a robust program to obtain the required data is supported by the Space Radiation Program. However, how to incorporate these data into risk prediction
Rationale for HRP Directed Research	
Research Impact/Earth Benefits:	
Task Progress:	New task for FY2006.
