Task Book Report Generated on: 04/19/2024

Fiscal Year:	FY 2012	Task Last Updated:	FY 05/30/2012
PI Name:	Urban, Randall M.D.		
Project Title:	Testosterone Supplementation as a Countermeasure against Musculoskeletal Losses during Space Exploration		
Division Name:	Human Research		
Program/Discipline:	HUMAN RESEARCH		
Program/Discipline Element/Subdiscipline:	HUMAN RESEARCHBiomed	ical countermeasures	
Joint Agency Name:		TechPort:	Yes
Human Research Program Elements:	(1) HHC:Human Health Counter	measures	
Human Research Program Risks:	(1) Muscle: Risk of Impaired Per	formance Due to Reduced Muscle Size, Streng	th and Endurance
Space Biology Element:	None		
Space Biology Cross-Element Discipline:	None		
Space Biology Special Category:	None		
PI Email:	rurban@utmb.edu	Fax:	FY
PI Organization Type:	UNIVERSITY	Phone:	409-772-1176
Organization Name:	University of Texas Medical Bra	nch at Galveston	
PI Address 1:	301 University Blvd.		
PI Address 2:	Rt. 0569 - 4.124 JSA		
PI Web Page:			
City:	Galveston	State:	TX
Zip Code:	77555-0569	Congressional District:	14
Comments:			
Project Type:	GROUND	Solicitation / Funding Source:	2009 Crew Health NNJ09ZSA002N
Start Date:	07/30/2010	End Date:	07/29/2013
No. of Post Docs:	1	No. of PhD Degrees:	
No. of PhD Candidates:		No. of Master' Degrees:	
No. of Master's Candidates:		No. of Bachelor's Degrees:	
No. of Bachelor's Candidates:		Monitoring Center:	NASA JSC
Contact Monitor:	Loerch, Linda	Contact Phone:	
Contact Email:	linda.loerch-1@nasa.gov		
Flight Program:			
Flight Assignment:			
Key Personnel Changes/Previous PI:	May 2012 report: Dr. Paddon-Jon	nes is no longer listed as a CoI on this project.	
COI Name (Institution):	Durham, William Ph.D. (University of Texas Medical Branch) Sheffield-Moore, Melinda Ph.D. (University of Texas Medical Branch) Dillon, Edgar Ph.D. (University of Texas Medical Branch)		
Grant/Contract No.:	NNX10AP86G		
Performance Goal No.:			
Performance Goal Text:			
	mass, muscle strength, and bone interactive or additive effects of strength and bone health. Our ge during spaceflight will protect ag resistance exercise protocols at p To achieve these goals we will te	sal is to determine the therapeutic efficacy of t mineral density in healthy humans during space the combination of testosterone and exercise of neral hypothesis is that the maintenance of nor gainst the functional loss of muscle and bone, a reventing or reversing functional impairments est the following specific hypotheses before, du	ceflight. We propose to examine the n lean body mass (LBM), muscle mal physiologic levels of testosterone and will maximize the efficacy of existing that occur during bed rest. uring and after 70 days of bed rest:
	1: Cycled testosterone replaceme	ent (weekly testosterone injections for 2 weeks	, followed by 2 weeks off, etc.) in

Task Book Report Generated on: 04/19/2024

conjunction with exercise will have an additive effect in preventing loss of muscle mass and muscle strength in men representative of the astronaut population compared to exercise with placebo testosterone. 2: Cycled testosterone replacement (weekly testosterone injections for 2 weeks, followed by 2 weeks off, etc.) in conjunction with exercise will have an additive effect in preventing loss of bone mass and alterations in markers of bone metabolism in men representative of the astronaut population compared to exercise with placebo testosterone. To address these hypotheses we will investigate the following specific aims before, during and after 70 days of bed rest: Aim 1: To determine the effect of cycled testosterone replacement in conjunction with resistance exercise during bed rest on muscle mass, muscle strength, and fatigue in men aged 24-55 years. **Task Description:** Aim 2: To determine the effect of cycled testosterone replacement in conjunction with resistance exercise during bed rest on markers of bone metabolism and bone mass in men aged 24-55 years. Current evidence suggests that the combination of testosterone and exercise will optimize the effectiveness of the existing exercise and nutritional countermeasures. Results from this proposal will lay the ground work for the implementation of combinational countermeasures that will additively work to maintain preflight physiology of astronauts during long-term spaceflight missions. Research Impact/Earth Benefits: Results from this study will further elucidate the role of testosterone in the maintenance of skeletal muscle and bone during long term bed rest as a model for space flight. The benefits to life on earth are It is hypothesized that maintaining appropriate balance between hormonal status, nutritional status, and physical activity during spaceflight is of critical importance in preventing musculoskeletal losses. It is our contention that the restoration of physiologic levels of testosterone is essential to prevent and/or restore spaceflight- and microgravity-induced losses in the musculoskeletal system. Current evidence suggests that the combination of testosterone and exercise will optimize the effectiveness of the existing exercise and nutritional countermeasures. **Rationale for HRP Directed Research:** Results from this study will further elucidate the role of testosterone in the maintenance of skeletal muscle and bone during long term bed rest as a model for space flight. The benefits to life on earth are extensive. It is hypothesized that maintaining appropriate balance between hormonal status, nutritional status, and physical activity during spaceflight is of critical importance in preventing musculoskeletal losses. It is our contention that the Research Impact/Earth Benefits: maintenance or restoration of physiologic levels of testosterone is essential to prevent and/or restore spaceflight- and microgravity-induced losses in the musculoskeletal system. Current evidence suggests that the combination of testosterone and exercise will optimize the effectiveness of the existing exercise and nutritional countermeasures. 1. One non-exercising subject successfully completed the study protocol. 2. Currently, three exercising subjects are enrolled in the bed rest phase of the experiment. Task Progress: 3. No data are currently available in order to maintain the double-blinded design of treatment in the experiment.
